

Everton Soares

AI & Workflow Automation Specialist

Cubatão, São Paulo, Brazil | Open to Remote International Opportunities

everton@growthtech.solutions | [+55 13 99677-5408](tel:+5513996775408) | <https://growthtech.solutions> | <https://github.com/everton-soares1985>

PROFESSIONAL SUMMARY

AI and workflow automation specialist who builds human-supervised systems for operational processes, communication, data handling, and job-application workflows. Hands-on experience with Python, LLM integrations, APIs, Playwright, SQLite, testing, and fail-safe controls. Translates business rules into documented, testable workflows with clear boundaries, persistent state, and operational validation.

CORE SKILLS

Python Automation | Workflow Design | LLM Integration | API Integration | Playwright | Browser Automation | SQLite | Operational Controls | Prompt and Rule Design | Testing | Troubleshooting | Structured Logging | Git/GitHub | Technical Documentation

RELEVANT EXPERIENCE

GrowthTech Solutions — Independent Automation & AI Project Builder | March 2026–Present

- Build and maintain Python automation systems for operational workflows, data processing, job applications, communication, and project documentation.
- Design workflow rules, validation boundaries, human checkpoints, and failure handling before connecting AI components to operational actions.
- Integrate language models through OpenRouter with model selection, fallbacks, usage controls, and structured handling of unavailable services.
- Implement APIs, SQLite state, browser automation, automated tests, logging, dry-run modes, and reproducible documentation across independent projects.

SELECTED PROJECTS

Wellfound Application System and Narrative Router

Technologies: Python, Playwright, SQLite, OpenRouter, YAML, JSON, unittest, pytest

- Built a supervised application workflow that separates AI-generated content from browser control and requires human review for sensitive actions.
- Implemented deterministic routing across four career profiles, releasing only authorized facts and preserving explicit prohibited-claim boundaries.
- Added SQLite ledgers, checkpoints, daily limits, locks, atomic reservations, duplicate protection, and post-action state verification.
- Validated each stage through offline fixtures, deterministic tests, preview modes, shadow runs, and a supervised real-world workflow.

GrowthTech WhatsApp AIOS

Technologies: Python, Evolution API, webhooks, SQLite, OpenRouter, PowerShell

- Built a local WhatsApp automation ecosystem connecting inbound webhooks, lead data, controlled outbound workflows, and LLM-assisted responses.
- Integrated line-status checks, sending limits, persistent state, structured logs, and operational safeguards for supervised communication.
- Maintained local execution procedures and troubleshooting documentation for repeatable Windows-based operation across project workflows.

Multimodal English Interview Coach

Technologies: Python, Gemini multimodal API, CLI, structured parsing, automated tests

- Built and published a coach that analyzes video, audio, or transcripts and produces structured interview-feedback reports.
- Developed CLI and video-processing modes with parsers that convert model output into consistent, reviewable sections.
- Added automated tests and documented local workflows to support reproducible use and future maintenance.

Content Evidence Automation

Technologies: Python, Git, OBS API, AI integration, local-first workflows

- Built and published a local-first system combining repository context, OBS control, and AI to prepare technical evidence and content packages.
- Structured capture, processing, and documentation steps so generated materials remain traceable to the underlying project work.

TECHNICAL SKILLS

Languages and Scripting: Python, PowerShell, YAML, JSON

AI and Automation: OpenRouter, Gemini multimodal API, prompt and rule design, Playwright, browser automation, human-supervised workflows

Data and Integrations: SQLite, REST APIs, webhooks, Evolution API, OBS integrations

Testing and Operations: unittest, pytest, dry-run and preview modes, logging, checkpoints, locks, duplicate protection, troubleshooting

Delivery: Git, GitHub, branches, commits, technical documentation, Windows operations

EDUCATION & CREDENTIALS

- Troubleshooting and Debugging Techniques — Google / Coursera, completed
- Information Technology Fundamentals — IBM SkillsBuild, completed
- Google IT Automation with Python Professional Certificate — In progress
- IBM AI Developer Professional Certificate — In progress

LANGUAGES

- Portuguese — Native
- English — Conversational
